SUMMARY

Full Stack Software Engineer with professional experience building web applications, RESTful APIs, and production data systems in Java/Spring Boot and React/Next.js/TypeScript. Builds AI-powered software: a Claude-based desktop agent with runtime tool generation, a two-gate permission model, and fully local speech, plus a real-time PyTorch computer vision pipeline. Uses Claude Code and agentic tooling daily to ship features faster, and is completing IBM's Generative AI Engineering Professional Certificate.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, HTML, CSS, PHP, Python
Frameworks & Libraries: React, Node.js, Next.js, Nest.js, Spring Boot, Tailwind, Flutter, NumPy, scikit-learn
Developer Tools: Git, Docker, AWS (EC2), Kafka, PostgreSQL, Oracle DB, MSSQL, Microsoft Access, Liquibase, Jenkins, PyTorch, OpenCV, Figma, Claude Code, LLM APIs

EXPERIENCE

Web Developer | *Yousaf School System* – Remote — January 2026 – Present
- Worked with the school's founder and administrative office to define requirements for a new website and a student database to replace paper and Excel records
- Designed the website in Figma for UX review; building it with Next.js and React to advertise the school, take admission sign-ups online, and link to a student portal in development
- Building a Microsoft Access database for up to 10,000 students, with related tables, queries, and forms for admissions and grade-based tuition, for students, teachers, and administrative staff
- Tech: Next.js, React, Node.js, Figma, Microsoft Access, SQL

Coding Instructor | *Impact A&C* – Vancouver, BC — April 2024 – June 2025
- Taught programming to students from kindergarten through grade 12 using project-based lessons adapted to each age group, covering Python basics, app development, Scratch, and game modding

Software Engineer | *ZE PowerGroup* – Richmond, BC — February 2023 – April 2024
- Maintained a large-scale production database ingesting real-time energy and commodities futures pricing from third-party market data vendors, writing SQL queries to find misaligned or incorrect data and schema issues and deploying the fixes as versioned Liquibase changesets
- Investigated Jira tickets for data not being scraped correctly, traced most failures to vendor formatting changes, and updated the regex-based parsers to restore ingestion and minimize downtime for pricing systems
- Designed new database schemas as Liquibase changesets and built data-source integrations for new clients
- Built an automated test suite of Gradle tasks, run from the command line and in the CI/CD pipeline, that automated 95% of previously manual test cases, reducing testing time and improving defect detection
- Tech: Java, Spring Boot, SQL, Oracle DB, Liquibase, Gradle, Jenkins, Elasticsearch, JIRA

Software Engineering Intern | *Atomic47 Labs* – Vancouver, BC — January 2021 – April 2021
- Developed and documented Nest.js REST endpoints to create, update, and delete user profiles and retrieve cryptocurrency transaction receipts, writing API tests and verifying each endpoint in Postman
- Consolidated a multi-step sign-in flow into a single React portal, cutting three clicks from every login
- Tech: Nest.js, React, Postman, REST APIs

Full Stack Developer | *UBC* – Kelowna, BC — September 2019 – December 2020
- Built a React and TypeScript research platform with a PHP and Joomla back end, collecting data from thousands of Canadian clinics for research into cardiovascular conditions common in senior patients
- Took secure profile management and REST API endpoints from design through release, reducing corrupt data entries with field-level input validation and automated data-cleaning scripts
- Tech: React, TypeScript, PHP, Joomla, Nest.js, SQL, Relational Databases, Docker, Linux, Git

PROJECTS

NOVA (Voice-First Proactive Desktop AI Agent)
- Built a voice-first Windows desktop AI agent on Claude that reads native apps and browsers via UI Automation and Playwright, runs fully local speech, and integrates Google Workspace APIs
- Designed a two-gate permission model, runtime tool generation with isolated assemblies and automatic git rollback after repeated failures, and persistent memory; led design and QA with Claude Code as coding collaborator
- Tech: C#, .NET 10, Claude API, Avalonia, Playwright, Windows UI Automation, SQLite, Whisper, Kokoro

Capsule Damage Detection System (Computer Vision)
- Developed a real-time computer vision pipeline using Region of Interest (ROI) extraction and deep learning to detect and classify the physical state of medical capsules
- Optimized hardware inference latency using CUDA acceleration, and applied pre-inference cropping, normalization, and grayscale conversion to reduce background noise
- Tech: Python, PyTorch, OpenCV, CUDA, NumPy, Git

EDUCATION

University of British Columbia | *Bachelor of Arts, Major in Computer Science* — 2022
Douglas College | *Diploma in Computer Science and Information Systems* — 2017
IBM via Coursera | *Generative AI Engineering Professional Certificate* — *In Progress*
