SUMMARY

Full Stack Developer with 4+ years of professional experience building scalable web apps and RESTful APIs with a proven track record of optimizing data pipelines and modernizing system architectures.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, HTML, CSS, PHP, Python

Frameworks & Libraries: React, Node.js, Next.js, Nest.js, Spring Boot, Tailwind, Flutter, NumPy, scikit-learn

Developer Tools: Git, Docker, AWS (EC2), Kafka, PostgreSQL, Oracle DB, MSSQL, Liquibase, Jenkins, PyTorch, OpenCV

EXPERIENCE

Full Stack Developer

April 2024 – Present

Freelance Contractor

Vancouver, BC

- Built and documented a Next.js web app for potential clients
- Deployed and optimized AWS EC2 instances to securely host client applications, automating manual workflows to reduce processing overhead by 80%
- Enhanced application security by updating outdated database logic and implementing 2FA
- Tech: Next.js, Node.js, Python, Tailwind, AWS, MSSQL, GitHub, Postman

Software Engineer

February 2023 – April 2024

Zema Global Data Corporation

Vancouver, BC

- Improved data processing speed by 65% for millions of CRUD operations per minute on Oracle/SQL databases
- Developed microservices to efficiently perform ETL functions on billions of daily data entries from various sources
- Developed automated test tools that improved software quality and reliability, boosting testing efficiency by 95%
- Tech: Java, Spring Boot, SQL, Oracle DB, Liquibase, Gradle, Jenkins, Elasticsearch, JIRA

Full Stack Developer

September 2019 – December 2020

University of British Columbia

Kelowna, BC

- Designed and developed a scientific research platform system to handle and analyze data from thousands of Canadian clinics
- Completed full SDLC for secure profile management and REST API endpoints, reducing corrupt data entries by 70%
- Engineered relational databases and data analysis tools using PHP and SQL to examine patient metrics with 98% test coverage
- Tech: React, TypeScript, Nest.js, PHP, SQL, Relational Databases, Docker, Linux, Git

PROJECTS

Capsule Damage Detection System (Computer Vision)

- Developed a real-time computer vision pipeline using Region of Interest (ROI) extraction and deep learning to detect and classify the physical state of medical capsules
- Optimized hardware inference latency using CUDA acceleration
- Incorporated pre-inference cropping, normalization and grayscale to entirely mitigate background noise
- Tech: Python, PyTorch, OpenCV, CUDA, NumPy, Git

AI Incident Analysis Engine (DevOps/SRE ML Monitoring)

- Built a real-time data streaming pipeline to detect and monitor live infrastructure metrics and anomalies including error rates, request counts, and high system latency
- Implemented an unsupervised machine learning model utilizing the Isolation Forest algorithm to detect multi-variable anomalies, dynamically flag abnormal server behaviors, and automatically handle the lifecycle of a service alert from creation to auto-resolution
- Tech: Python, Apache Kafka, scikit-learn (Isolation Forest), PostgreSQL, SQLAlchemy

EDUCATION

University of British Columbia | Bachelor of Computer Science

August 2022

Douglas College | Diploma in Computer Science and Information Systems

August 2017

IBM via Coursera | Generative AI Engineering Professional Certificate

In Progress
